## Apparatus for the determination of medical, electro-chemical measured values relevant to organic or metabolic functions

Veröffentlichungsnr. (Sek.) ☐ US5425361

Veröffentlichungsdatum : 1995-06-20

Erfinder : FENZLEIN PAUL-GERHARD (DE); ANDERER WOLFGANG (DE)

Anmelder : FENZLEIN PAUL GERHARD (DE)

Veröffentlichungsnummer : ☐ DE4139122

Aktenzeichen:  
(EPIDOS-INPADOC-normiert) US19920983665 19921130

Prioritätsaktenzeichen:  
(EPIDOS-INPADOC-normiert) DE19914139122 19911128

Klassifikationssymbol (IPC) : A61B5/05

Klassifikationssymbol (EC) : A61B5/00N8, G01N27/416D1

Korrespondierende Patentschriften ☐ EP0545242, ☐ JP6007355

### Bibliographische Daten

A measuring apparatus for the determination of medical, electro-chemical measured values relevant to organic or metabolic functions comprises a sensor head, a coupling, to which the sensor head is exchangeably secured, and a microprocessor-controlled base instrument, which is provided with a central control unit, with a data detection and evaluation unit to detect and convert the measuring signals forwarded by the coupling in accordance with an in each case associated calibrating regulation, with a display to display the measured values and with a keyboard to enter measuring-relevant data. The sensor head with its measuring electrodes is precalibrated to standard when manufactured, the calibrating regulations in each case associated with a certain measuring electrode being stored in the base instrument and the data detection and evaluation unit, controlled by a corresponding external entry at the base instrument, having access to the calibrating regulations associated with the measuring electrodes in each case located in the sensor head when a sensor head is used for measuring.
